

Nature Activity Number: E001

Activity Name: Magic Eye

Activity Objective/Purpose: Sensory Awareness Activity. This activity stresses the full use of the sense of sight.

Equipment Needed: The magic eye is a piece of cardboard with a hole in the middle, a knothole in a piece of wood, or even a circle made with your thumb and index finger. Cardstock circles glued to a popsicle stick (26) are available in the OWLS Nest in BIN 01.

Activity Description:

The Magic Eye can be held at varying distances from your eye to focus on different things. Start by holding it next to your eye and looking through the hole at any object you choose. Slowly stretch your arm out toward this object, always looking through the Magic Eye. When your arm is at full length, look carefully at what you have framed. If it is close enough walk up and examine it closely. Choose another object for scrutiny through the Magic Eye.
